1.1 HealthIT is a USAID mechanism implemented by the University of Nairobi Enterprises and Services. The objective of USAID HealthIT Project is to establish and sustain a local Kenya-based resource for the management, development, maintenance and evolution of DHIS2 and its subsystems. These include the enhancement and implementation of EMRs/EHRs, Early Infant Diagnosis (EID) database, and the Child Protection Information Management System (CPIMS). This will be achieved by referencing and implementing government priorities as espoused in HIS policies, strategies, standards and reporting to support both national and county levels in health service provision. In addition, this will require working collaboratively with all stakeholders. Performance and accountability systems will be developed and enhanced while also strengthening institutional capacity in terms on human and health information systems evaluation. Our approaches are alive to the improvement of efficiency, effectiveness, of health service delivery with an aim to improving the health outcomes. These approaches align with the Health Act 2017, Kenya Health Policy (2014-2030), Kenya standards and guidelines for mHealth systems (2017), Standards and guidelines for Health information systems interoperability (2015), actualizing the Kenya Health Enterprise Architecture (2016) and volarizing the Kenya eHealth Policy (2016 -2030) as the core foundational instruments as a guide for IT investments in the health sector. A robust health information system is key in supporting the Universal Health Coverage (UHC) which is part of the country's Big4 Agenda. The Ministry of Health has integrated UHC as a goal in the broader Health Sector Strategy. HealthIT will support integration and interoperability along USAID's ideals of Digital Health. This will be achieved through the coalescing of the fragmented patchwork of health information sources in order to improve the efficiency and accountability of health systems towards enhancing public health for the country.
